B1399	<i>Acropora horrida</i>		 A photograph of a coral specimen, <i>Acropora horrida</i> , showing its characteristic branching structure. The coral is green and is growing on a reddish-brown substrate. The background is dark, and there is a faint watermark in the bottom left corner that reads "Korallen Schätze".
B1400	<i>Acropora humilis</i>		 A photograph of a large, dense colony of <i>Acropora humilis</i> coral. The coral is reddish-brown and has a rounded, bumpy appearance. It is growing on a rocky substrate in a shallow, clear water environment.
B1401	<i>Acropora hyacinthus</i>		 A photograph of a large, flat, plate-like colony of <i>Acropora hyacinthus</i> coral. The coral is reddish-brown and has a smooth, slightly wavy surface. It is growing on a rocky substrate in a shallow, clear water environment.

B1402	<i>Acropora insignis</i>		 A photograph of a coral specimen, <i>Acropora insignis</i> , showing a dense, branching structure with a pinkish-purple hue. The coral is positioned in front of a white grid background.
B1403	<i>Acropora jacquelineae</i>		 A photograph of a coral specimen, <i>Acropora jacquelineae</i> , characterized by its bright yellow-green, branching structure. The coral is shown against a dark background.
B1404	<i>Acropora kimbeensis</i>		 A photograph of a coral specimen, <i>Acropora kimbeensis</i> , displaying a branching structure with a pinkish-purple color. The coral is set against a white grid background.

B1411	<i>Acropora lovelli</i>		 A photograph of a large, branching coral specimen with a yellowish-tan color, set against a clear blue background. The coral has a complex, tree-like structure with many small polyps visible at the tips of the branches.
B1412	<i>Acropora macrostoma</i>		 A close-up photograph of a coral specimen with a dense, rounded, and somewhat bulbous structure. The color is a mix of light purple and white, with a textured surface.
B1413	<i>Acropora maryae</i>		 A close-up photograph of a coral specimen with a thick, finger-like or club-like structure. The color is a pale pink or light purple, with a smooth surface.

B1417	<i>Acropora nana</i>		 A photograph of a small, branching coral specimen with a brownish-orange hue and numerous small, white polyps. It is mounted on a light-colored, porous substrate.
B1418	<i>Acropora nasuta</i>		 A photograph of a coral specimen with a vibrant purple and blue coloration. The coral has a branching, tree-like structure with many small polyps. It is set against a dark background with a white grid pattern.
B1419	<i>Acropora natalensis</i>		 A photograph of a coral specimen with a yellowish-orange coloration. The coral has a branching, tree-like structure with many small polyps. It is set against a dark background with a white grid pattern. A watermark for 'Blue Ocean' is visible in the bottom left corner of the image.
